### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 20-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 2, 4 and 5 of U.S. Patent No. 6,736,580. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the features of the claims of the instant application are included in the parent only the claims of the instant application are broader.

The examiner notes the Terminal Disclaimer filed 11/01/2004 was to disclaim against the 6,655,888 patent and did not include reference to the 6,736,580 patent.

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Barlow (US 3,72,904). In the embodiment of Fig. 4, Barlow discloses a fastener having a socket drive (27) comprising a plurality of equally spaced, inwardly directed, rounded

Art Unit: 3677

lobes (31-33) of equal radius and equidistant from the axis of the fastener and a corresponding plurality of surfaces (28-30) shown as flat each located opposite a lobe and also equidistant from the center. Since the claims are directed to a fastener, the clearance between the lobes and the key driver is considered an intended use of which the Barlow would be capable depending upon the size of the fastener.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Allen (US 960,244) in view of Anderson (US 5,960,681). Allen discloses a conventional type fastener having a hexagonal recess for receiving an allen wrench but, does not disclose the recess provided with rounded lobes. Anderson discloses a fastener driver also having a hexagonal recess but, in Anderson the recess is provided with a plurality of equally spaced, inwardly directed, rounded lobes (34) of equal radius and equidistant from the axis of the fastener and a corresponding plurality of flat surfaces (28-32) each located opposite a lobe and also equidistant from the center for gripping the fastener. At the time the invention was made, it would have been obvious for one of ordinary skill in the art to provide the recess of Allen with lobes as disclosed in Anderson for the purpose of gripping the driver. The fastener being gripped to the driver would facilitate

Art Unit: 3677

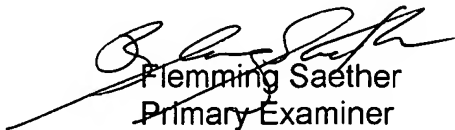

insertion and removal of the fastener by preventing the fastener and driver from being easily separated. Again, since the claims are directed to a fastener, the clearance between the lobes and the key driver is considered an intended use of which the Barlow would be capable depending upon the size of the fastener.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
